

The UC Santa Cruz

Arboretum & Botanic Garden

Presents

Jewels of the Garden: A Darwinian Natural History of Humming Birds

UCSC Professor of Ecology and Evolutionary Biology

Join Us for a talk by
Dr. Bruce Lyon
Sunday, March 24
1:00 - 2:15 pm

Dr. Lyon will explore hummingbird natural history from the perspective of a scientist who studies bird ecology and evolution.

Starting with an overview of the spectacular diversity of hummingbirds, some of their unique features, and their evolutionary diversification, he will then explore their ecology and will explore an amazing feature of Arboretum — its extraordinary number of hummingbirds — by considering the different types of nectar-eating birds around the world.

120 Arboretum Rd.
in Santa Cruz, CA

Free with Paid Admission
Admission is Free for Current Arboretum
Members, Volunteers, and UCSC Students

Visit us on the web at arboretum.ucsc.edu for more
